

GENERATING MEGAWATTS AND MEGA-SAVINGS

Wind energy has the power to reduce home energy bills.

Studies show that a 15% renewable electricity standard will save American consumers more than \$100 billion*. Why? Because more renewable energy means less demand for natural gas. This will cause natural gas costs to decrease approximately 15 to 20 percent, meaning we'll see lower home electric bills and less expensive home heating. Now that's something that will make Americans mega-happy. Support a 15% renewable electricity standard.
